**Chapter 1 The failure of no service,no call and WiFi**..... 6

**Example 1** The WiFi of iPhone 6 plus could be used,but the signal strength was poor ..... 7

**Example 2** iPhone 6 often had no service,and did not display IMEI number..... 8

**Example 3** The switch of iPhone 6 could not open,there was no WiFi address ..... 10

**Example 4** iPhone 6 had no service,when dialed \*#06#,could not display the serial number..... 11

**Example 5** After iPhone 6 falling,when dialed \*#06#,did not display the serial number ..... 14

**Example 6** iPhone 6 plus failed to call sometimes,and there had no service sometimes ..... 15

**Example 7** In the “about the machine” of iPhone 6,it could display WiFi address,but the WiFi switch could not be opened..... 16

**Example 8** The WiFi signal of iPhone 6 was poor,could not connected to the WiFi..... 17

**Example 9** After iPhone 6 plus falling,the switch of WiFi could not be opened..... 19

**Example 10** WiFi switch of the iPhone 6 Plus could not be opened ..... 19

**Example 11** The WiFi of iPhone 6 Plus could not be opened,in the “about the machine”,the address displayed as “unknown” ..... 21

**Example 12** iPhone 6 Plus showed that it was searching,when dialed \*#06#,but it could not display IMEI serial number..... 24

**Example 13** iPhone 6s was often no service,and it could search for signals occasionally ..... 26

**Example 14** After iPhone 6S falling into the water,it showed no service after inserting the SIM card ..... 27

**Example 15** iPhone 6 prompted that there was no service when we inserted the SIM card..... 28

**Example 16** iPhone 5S had no service,could not display the IMEI serial number ..... 31

**Example 17** There is no service after iPhone 6 Plus falling,and it was still not repaired after repairing ..... 32

**Chapter 2 Could not start up,the white apple,blue screen,restart**..... 35

**Example 18** iPhone 6 displayed the white apple after starting up and restarted again and again..... 36

**Example 19** iPhone 6 could not display after starting up,the current was higher..... 36

**Example 20** The screen of iPhone 5S was blue and restarted after disassembling..... 37

**Example 21** The screen of iPhone 5S was blue and restarted,and could not brush machine..... 39

**Example 22** The screen of iPhone 6 Plus was white when boot,and restartsed after LOGO appearing ..... 40

**Example 23** There was no response when pressed the switch of iPhone 6 Plus,and it could not start up

.....	42
<b>Example 24</b> iPhone 5S had no display,used the ampere meter to measure,it had response.....	44
<b>Example 25</b> iPhone 6S Plus showed the white apple after starting up,then restarted.....	44
<b>Example 26</b> iPhone 6S Plus had no display when started up,but there had reaction when connected the computer.....	47
<b>Example 27</b> The current of iPad Air2 was high when started up,and the mother board chip was very hot.....	49
<b>Example 28</b> iPad Air showed the white apple and restarted repeatedly after starting up .....	51
<b>Example 29</b> iPad 2 3G restarted after using a period of time .....	55
<b>Example 30</b> About iPhone 6S Plus,brushed the machine,but it could not pass and reported the error code 4013 .....	57
<b>Example 31</b> iPhone 6S could not start up after falling .....	59
<b>Example 32</b> iPhone 6 power consumption was fast and it was very hot,when browsed photos,the direction was abnormal occasionally.....	62
<b>Chapter 3 The failure of the display and touch</b> .....	66
<b>Example 33</b> The touch function of iPhone 5 could not be used,replaced the touch screen,but it could not be repaired .....	67
<b>Example 34</b> The touch screen of iPhone 6 bounced,and opened APP procedure automatically .....	70
<b>Example 35</b> The touch screen of iPhone 6 has no response at all .....	75
<b>Example 36</b> iPhone 6 was broken,replaced the screen,but it could not be used.....	80
<b>Example 37</b> The screen of iPhone 6 Plus has no response when slid,and the touch function was disable.....	82
<b>Example 38</b> The touch screen of iPhone 6 Plus could not be used sometimes,and white stripes appear.....	84
<b>Example 39</b> The touch screen failed when the iPhone 6S flooded.....	86
<b>Example 40</b> iPad 4 touch screen function of a region cannot be used.....	89
<b>Example 41</b> The backlight brightness adjustment function of the iPhone 5S was not normal .....	91
<b>Example 42</b> There was no display for iPhone 6 when started up,the motherboard screws column was lost.....	93
<b>Example 43</b> There was no display suddenly in iPhone 6 Plus normal use .....	96
<b>Example 44</b> The right side of the screen of the iPhone 6 Plus did not light,the left could be showed normally.....	100
<b>Example 45</b> The right side of the screen of iPad 4 did not light up.....	101
<b>Example 46</b> Replaced the external screen of the iPhone 6 Plus after the screen breaking .....	105
<b>Example 47</b> The screen of iPad Air has a serious water marks after watering,replaced a inner screen.....	112
<b>Chapter 4 Other functional failures</b> .....	118
<b>Example 48</b> The screen of iPhone 5S was blue and restarted,battery power was not allowed.....	119
<b>Example 49</b> Connected iPhone 6 to the computer,but it could not be connected,and the Ace assistant did not show the data.....	121
<b>Example 50</b> The camera of iPhone 6 could not be used and the flash could not be turned on.....	127
<b>Example 51</b> There was no ringtones of iPhone 6,when opened the ringtone option,the system operated very slowly .....	129
<b>Example 52</b> The fingerprint option of iPhone 6 was gray and could not be opened .....	132

**Example 53** The sound of iPhone 6 was normal, but the microphone was sounded small ..... 135

**Example 54** The camera of iPhone 6 could camera, but could not take pictures, the flashlight could not open ..... 137

**Example 55** The battery of iPhone 6 was not durable, the light sensor was out of order, and the light of the screen would not turn off during calling ..... 140

**Example 56** The compass function of iPhone 6 was out of order ..... 142

**Example 57** The flashlight function of iPhone 6 could not open, and the flash lamp could not be used. .... 146

**Example 58** iPhone 6 Plus was no loud voice when played the movie ..... 147

**Example 59** The fingerprint and HOME key of iPhone 6 could not be used ..... 152

**Example 60** The front camera of iPhone 6 Plus was out of order, and the receiver had no voice ..... 153

**Example 61** Pressed the switch of iPhone 6S when the machine was in the state of standby for a long time, there was no reaction ..... 157

**Example 62** There was no sound of iPhone 6S when the machine was hands-free ..... 159

**Example 63** The volume key of iPhone 6S Plus did not respond ..... 160

**Chapter 5 The charge, leakage, current display and other related failure** ..... 162

**Example 64** After the iPhone 6S dropping into the water, it could not be powered on, the voltage regulator showed 50mA, then powered down cycle ..... 163

**Example 65** It could charge when the screen of iPad Air was bright, but could not charge when the screen was turned off ..... 166

**Example 66** Charging power of iPad 4 displayed less and less ..... 169

**Example 67** iPad Air could not charge when started up, but it could charge when turned off ..... 171

**Example 68** iPhone 5S was turned off automatically after charging, and it could not be started up. 173

**Example 69** The screen of the iPhone 5S was turned off suddenly, and the current was high when started up ..... 175

**Example 70** After the iPhone SE dropping into the water, the power consumption was fast ..... 178

**Example 71** The leakage of iPhone SE was 50mA, we could not call sometimes ..... 179

**Example 72** iPhone 5S was hot during charging, and the battery was not durable ..... 180

**Example 73** iPhone 5S had leakage, the circuit board had obvious heating ..... 181

**Example 74** The regulated power supply showed the current of iPhone 6 was 70mA, it could not be powered on ..... 182

**Example 75** iPhone 6 could not be powered on, the regulated power supply showed a 110mA-130mA transition ..... 184

**Example 76** After iPhone 6 dropping into the water, there have leakage 60mA, and it could not be started up ..... 185

**Example 77** iPhone 6S Plus could not be started up after the hard disk being expansion, the current dropped back from 100mA to 0mA ..... 188

**Example 78** iPhone 6S could not be started up after replacing the camera power supply chip ..... 190

**Example 79** iPhone 6S Plus dropped into the water, it could show the charging icon during charging, but the electricity was more and more less ..... 191

**Example 80** iPhone 6S dropped into the water, the starting current jumped from 0mA-120mA repeatedly ..... 192

**Example 81** After the US version of iPhone 6 dropping into the water, there had the leakage, the time of use was very short ..... 196

**Example 82** The battery of iPhone 5S was not durable,and the battery was powered down quickly  
**Chapter 6 The fault of dropping into the water,falling down,short circuit,broken line and burning** ..... 202

**Example 83** iPhone 6 could not be started up after dropping into water,and the current was 480mA ..... 203

**Example 84** A large area of the motherboard dropped into the water,it could not be powered on ... 208

**Example 85** The screw holes of iPhone 6 was punched manually,the motherboard was disconnected ..... 211

**Example 86** iPhone 6 dropped into the water,it could not be started up after repairing the touch base and WIFI..... 212

**Example 87** The line of the PCB on the screw column of the iPhone 6 motherboard was broken by the others ..... 217

**Example 88** iPhone 6 had been fallen down,it could be started up,but it was restarted frequently.. 220

**Example 89** After iPhone 6S Plus dropping into the water,the front camera was normal,but the rear camera was not normal ..... 222

**Example 90** After iPhone 6 falling down,the firmware version was not found in the system..... 226

**Example 91** iPhone 6 dropped into the water,it was started up automatically after turning off,and it was the Flower Screen..... 229

**Example 92** iPhone 6 dropped into the water,after repairing it,the screen was showed to be the Flower Screen ..... 231

**Example 93** After iPhone 6 falling,there was no display when started up,and the current was large when powered on..... 232

**Example 94** The motherboard of iPhone 6 was burnt during charging,,did not be turned up ..... 234

**Example 95** There have many missing points on the motherboard of iPhone 6,removed the components of the motherboard and installed them on the other board. .... 236

**Example 96** Large area of solder joint on the hard disk PCB if of iPhone 6 Plus were dropped .. 238

**Example 97** After iPhone 5S dropping into the water,the screen showed abnormally,replaced the screen backlight module ..... 240

**Example 98** The iPad Air 2 could not be started up after dropping into the water,the motherboard was seriously burning and corrosive..... 243

**Chapter 7 The fault of reporting the error code during brushing machine** ..... 247

**Example 99** Expanded the 16GB of hard disk of the iPad mini 1 to be 64GB ..... 248

**Example 100** Used the iTunes to brush the iPad 4,it reported the unknown error (9)..... 251

**Example 101** The screen of iPad Air 2 was red and re-started up automatically after entering into the system..... 254

**Example 102** When the iTunes of iPhone 5S updated the firmware,it reported an unknown error (40) ..... 256

**Example 103** After iPhone 6 Plus falling,it reported the unknown error (56) when iTunes brushed the machine ..... 258

**Example 104** iPhone 6 was reported an unknown error (-1) during brushing the machine..... 260

**Example 105** iPhone 6 Plus could not be started up after repairing by himself,the constant current was 70mA ..... 264

**Example 106** iPhone 6 Plus could not be started up,and reported an unknown error (9) during brushing the machine..... 266

**Example 108** iPhone 6S Plus showed the white apple and re-started up after turning on,brushed the machine and reported an unknown error (4013)..... 275

**Example 109** After iPhone 6 being fallen,it showed the white apple when started up,then re-started up,brushed the machine and reported an unknown error (4005) ..... 278
